DETAILED ACTION

1. This Office Action is the answer to the Amendment filed on March 29, 2010, which paper has been placed of record in the file.
2. Claims **1-33** are pending in this application.

Allowable Subject Matter/Reasons for Allowance

3. Claims **1, 11, 14, 19, and 25-33** are allowed over the prior arts cited records.

The closest prior arts are:

Block (US 6,377,938) discloses a method and system for real time subscriber billing of subscribers that have prepaid subscriber accounts (col. 4, 11. 12 to 14; 11. 49 to 50). Block discloses that subscribers are billed for user initiated usage events such as calls and for system created non usage events such as monthly equipment rental fees (col. 7, line 55 to col. 8, line 6). Block discloses that call charges are calculated in real time during the call and stored in memory (col. 7, 11. 56 to 60). The Business Management System 50 notifies the Processor of payments made by the subscriber and the processor in turn updates the subscriber payment account (col. 7, 11. 64 to 67). The Processor also updates the subscriber's account with system created non usage event charges and subtracts these charges from the subscribers account (col. 7, 1. 67 to col. 8, 1. 3). Block discloses that call charges are deducted in real time from the subscribers account and as such discloses that the pricing is done in conjunction with a billing process. Block does disclose that the Processor updates the subscriber's account

with non-usage events such as flat charges. However, this updating is done in conjunction with deducting or billing the subscriber for the charges and are thus not independent of the billing process.

Jagadish (US 6,058,170) discloses the summary information is stored in a summary database that is updated in real-time as calls are placed (see, column 3, lines 42-58). That is, similar to Block, Jagadish updates the information when initiated by calls. For example, in Jagadish, a customer places calls from calling stations, which causes a corresponding automatic message accounting (AMA) record to be generated (see, FIG. 2 and corresponding text). Then, each AMA record is passed to a call detail for making the record available for call pricing at which point the system applies the customer specific billing to update the summary information stored in the summary database (see, column 3, lines 42-58). Thus, Jagadish does not disclose the updating is independent of the billing process.

Therefore, it is clear from the description of Block's and Jagadish's inventions that the prior arts do not considered the possibility of: the pricing process includes pricing the system-created non-usage events and/or the non-system-created events independent of a billing process, as included in claims 1 and 25-33; the pricing includes pricing the non-usage event independent of a billing process that includes a non-system-created event, as included in claims 11 and 19; wherein all available system initiated and created non-usage events independent of user initiated events for a current billing period are priced at a first Opportunity after a prior billing period that includes non-system-created events ends, as included in claim 14;

4. Claims (2-10), (12, 13, 15-18) and (20-24) are allowed because they are dependent claims of the allowable independent claims 1, 11 and 19 above, in that order.

Conclusion

5. Claims **1-33** are allowed.
